QUALIFICATION SUMMARY

Business Analytics student with experience in cleaning, analyzing, organizing, and visualizing data with SQL, Python, Machine Learning, Artificial Intelligence, MS Excel, and Tableau.

EDUCATION

Montclair State University, Montclair, NJ

Expected: Aug 2027

Master's Degree in Business Analytics | GPA 4.0

Extra-Curricular: Active Member of MSU Chess Club

Spring 26-Present

Relevant Courses: Advanced Business Statistics, AI in Business Analytics, Data Wrangling Analysis, Advanced Data Mining

Montclair State University, Montclair, NJ

Expected: Dec 2025

Bachelor's Degree in Business Analytics | GPA 3.6

Minor in Finance

Extra-Curricular: Board Member of Data Driven Student Alliance

Fall 22-23

Relevant Courses: Programming in Business, Foundations of Business Analytics, Database Systems, Data Mining, Text Mining, Big Data management, Crypto-currency, Investment

EXPERIENCE

Montclair State Financial Aid, Montclair, NJ

Feb. 2026 – Present

Data Analyst Co-op

- Utilized SQL to extract, join, and analyze student datasets while applying conditional logic to improve reporting accuracy, streamline data validation, and support financial aid operations.
- Developed 5-year NASFAA forecasting models using student financial aid data to evaluate projected loan eligibility impacts from federal legislative changes.
- Increased efficiency by 3 times of data cleansing of monthly reports by creating and implementing PowerQuery to sort and cleansed data.
- Used similar tools to determine classification of Student Major, GPA, and Enrollment through Scholarship Program in the university to improve efficiency for the data entry and cleaning team.
- Used Excel to further implement and analyze data processing to ensure output quality of data prediction.

PROJECTS

[MSU Financial Forecasting](#) | Technology Used: SQL and Excel (Functions, Power Query)

Worked with NASFAA to examine the impact of the Big Beautiful Bill on students financial aid. Engineered advanced Excel lookup functions to extract complex datasets and established key performance indicators to drive a 5-year strategic financial forecast. Created a SQL Server of the data and leveraged SQL to clean up the data, created CTEs and views, and arranged the data for illustration purposes.

[Bank Loan Correlation](#) | Language Used: Python, SQL, Tableau

Obtained US bank loan data from Kaggle database to find out if there were correlations between loan acceptance and customer acceptance. Used Python to create Machine Learning models (KNN,

ANN, Random Forrest), cleaned up data with and arranged the data with SQL, and visualized it. Used Google's Gemini API to create human-readable explanations and recommendations based on complex model outputs.

SKILLS, LANGUAGES, AND INTERESTS

Technical: Python (Seaborn, Pandas, MATLAB, Spacy, SciKit-Learn), SQL, Tableau, MS Excel (SUMIFS, XLOOKUP, Pivot tables), HTML5, CSS

Certifications: Excel Specialist Certification

Languages: Fluent in English and Farsi
